

WARNING

You are responsible for understanding your installation of a
PROPANE FIREBOWL

MUST READ THE FOLLOWING STEPS

1. *The propane from your supply line feed to the
burner*

*must not exceed 1/2lb of pressure or 14 inches
water column.*

2. *FOR HIGH WIND AREAS TO AVOID BUILD UP of
Propane under the fire-glass pan,
Add 4" of 3/4 "rock and then silica sand to fill
this void area as just so the pan barley
touches the top of the sand.*
